- Founded in 2003
- Headquartered in La Jolla, California
- Billions in annual processing volume
- Established partnership channels consisting of ISVs, VARs, ISOs and MLS

PAYMENT LOGISTICS"

Our core competencies:

I. **Full liability merchant acquirer** sponsored by Wells Fargo Bank where we maintain a unique and dedicated BIN and ICA. We underwrite and manage merchant account risk, provide 24/7 merchant support and perform all portfolio maintenance functions in-house.

II. **Payment technology and gateway provider** that enables integrated payments in POS systems, ecommerce and mobile applications. Our proprietary technology addresses the payment challenges of our time by removing POS applications from the scope of QIR and PA-DSS compliance, minimizing a merchant or service provider's scope of PCI DSS compliance, providing connectivity to the major processing networks and enabling support for EMV, NFC and other emerging payment technologies.

III. **Payment technology innovator** that develops novel ways to make payments more efficient and convenient for merchants and their patrons while optimizing total spend and driving repeat business.

Our go-to-market strategy centers on the formation of a variety of value-added partnerships designed around our core competencies as an innovative merchant account, payment technology and payment gateway provider.

Partnership Benefits:

- Focus on core competencies
- Build marketable asset & brand awareness
- Improve EMV adoption rates & merchant stickiness
- Eliminate payment card industry compliance challenges
- Gain competitive advantages with leading edge technology
- Grow revenue & better align interests with customer outcomes

Be the
Payments
Provider
Your brand. Our technology,
infrastructure and support.

Leading Edge Payment Technology

In-house Marketing, Sales & Support

Industry Leading Revenue Sharing

Differentiating Technology

In addition to our robust payment solutions, our partners gain competitive advantages in the marketplace with our differentiating payment technology.

SMS Text Message Receipts

Promotes customer engagement, loyalty enrollment, merchant ratings, customized promotions, A/B testing and more. Available with Paygistix Client, Paygistix Cloud, Paygistix Connect, Paygistix Pay at the Table and PayLink.

Dynamic Pay at the Table

Speeds table turns, gathers real-time performance ratings with instant notifications to staff and more. Available with Paygistix Pay at the Table and PayLink.

Order Online, Order Ahead, Order at the Table & Mobile Self-Checkout

Facilitates commerce, optimizes revenue and improves guest experience. Available with Paygistix Connect and PayLink.

Payment Device Estate Management

Remote communications with payment devices including the ability to reboot, update, send commands, manage local IPs in DHCP mode and more. Available with Paygistix Client and Paygistix Connect.
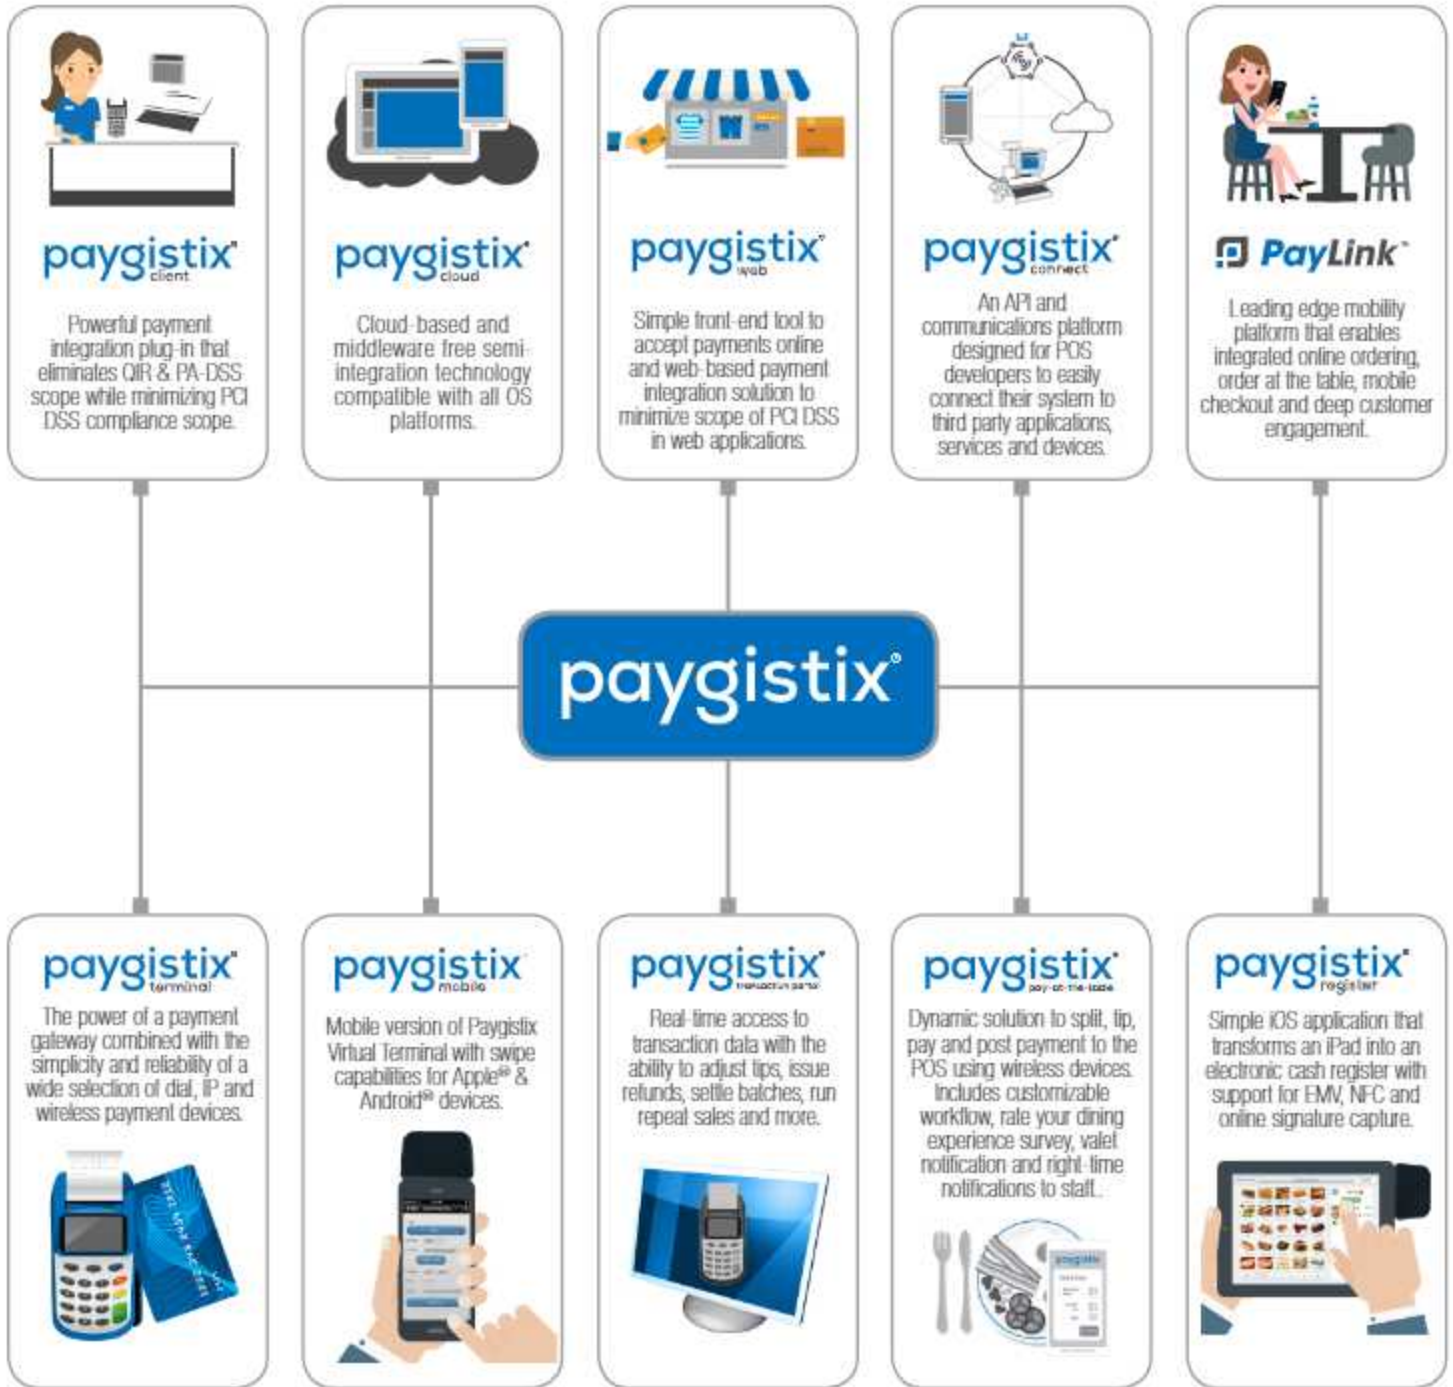

Payment Kiosk & IoT Connectivity Solutions

Promotes rapid innovative solution development for the modern age. Available with Paygistix Client, Paygistix Cloud, Paygistix Connect and PayLink.
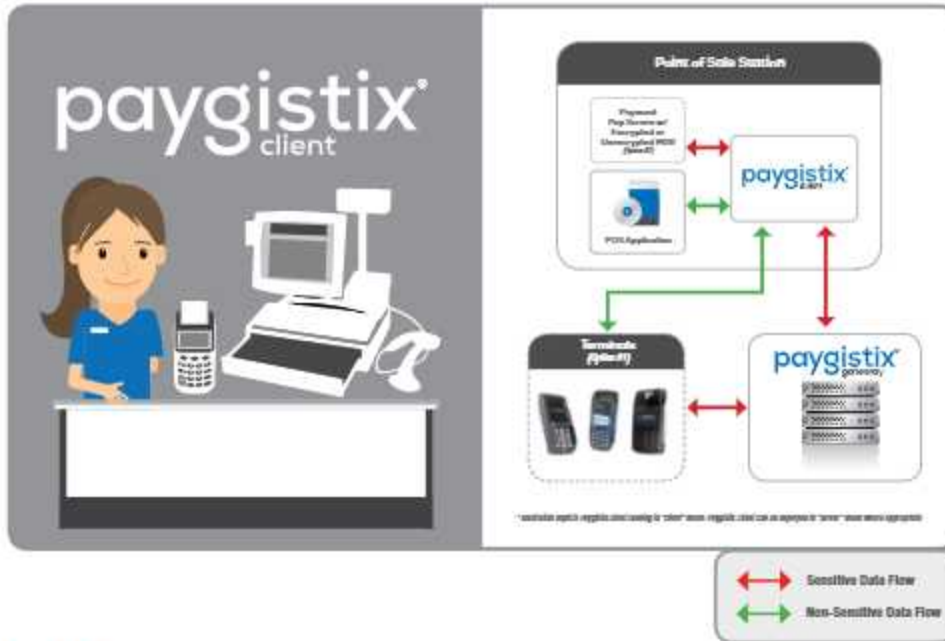

PAYMENT LOGISTICS

Paygistix Ecosystem

At the heart of our payment technology is the Paygistix EMV Gateway, our PCI DSS level 1 validated transaction processing switch which supports dial, IP and wireless connectivity and connects to several major processing networks.
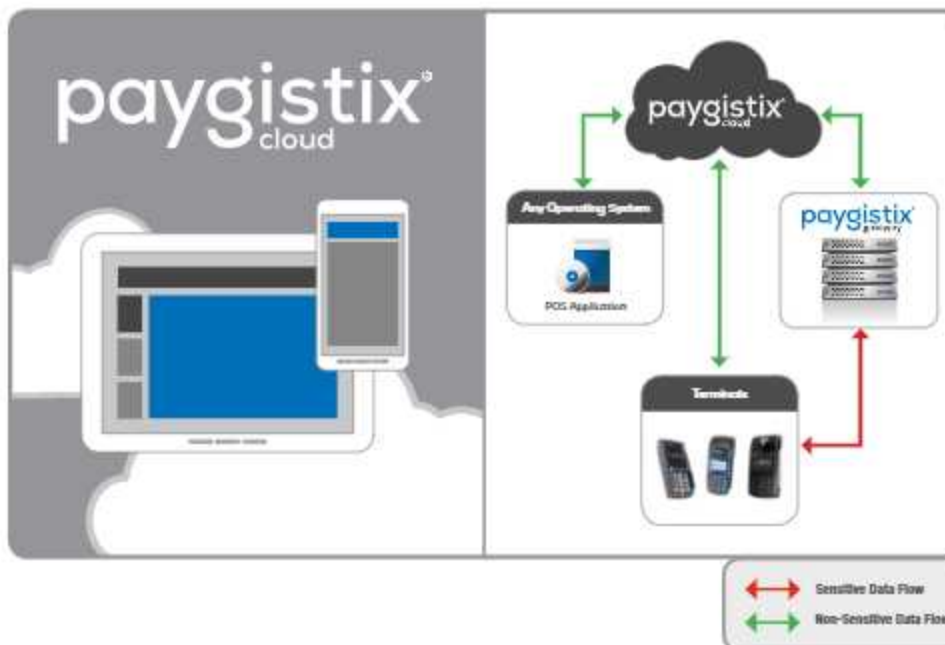

paygistix client
Powerful payment integration plug-in that eliminates QIR & PA-DSS scope while minimizing PCI DSS compliance scope.

paygistix cloud
Cloud-based and middleware free semi-integration technology compatible with all OS platforms.

paygistix web
Simple front-end tool to accept payments online and web-based payment integration solution to minimize scope of PCI DSS in web applications.

paygistix connect
An API and communications platform designed for POS developers to easily connect their system to third party applications, services and devices.

PayLink
Leading edge mobility platform that enables integrated online ordering, order at the table, mobile checkout and deep customer engagement.

paygistix

paygistix terminal
The power of a payment gateway combined with the simplicity and reliability of a wide selection of dial, IP and wireless payment devices.

paygistix mobile
Mobile version of Paygistix Virtual Terminal with swipe capabilities for Apple® & Android® devices.

paygistix transaction portal
Real-time access to transaction data with the ability to adjust tips, issue refunds, settle batches, run repeat sales and more.

paygistix pay-at-the-table
Dynamic solution to split, tip, pay and post payment to the POS using wireless devices. Includes customizable workflow, rate your dining experience survey, valet notification and right-time notifications to staff.

paygistix register
Simple iOS application that transforms an iPad into an electronic cash register with support for EMV, NFC and online signature capture.

PayLink™

Leading edge mobility platform that enables integrated online ordering, order at the table, mobile checkout and deep customer engagement. With PayLink, wait staff can take an order at the table on their mobile device and patrons can add items and checkout at their leisure. No app download required.

We've improved the way patrons order and pay.

Increases revenue, decreases cost, speeds service and improves customer satisfaction. Great for table service, bar, QSR, stadium and festival venues.

paygistix
client

Our flagship semi-integration EMV solution for traditional POS systems. Powerful payment integration plug-in eliminates PA-DSS and QIR scope while minimizing PCI DSS compliance scope to the equivalent of a standalone payment device.

paygistix
cloud

A purely web based semi-integration technology (no middleware whatsoever) that's compatible with just about any OS platform and provides POS application developers with instant support for a variety of EMV payment devices and capabilities.

paygistix®
web

Powerful web-based payment integration solution to remove web applications from the scope of PCI DSS compliance. Point and click code generator for simple website integration or in-depth API for advanced shopping cart integration. Mobile optimized for maximum versatility.

paygistix®
connect

An API and communications platform designed for POS developers to easily connect their system to third party applications, services and devices. Our unique scripting language and connectivity protocols provide a simple way to elegantly connect disparate systems with ease. As the Paygistix Connect ecosystem expands, the opportunity for innovation grows exponentially. **What will you connect?**
